ABSTRACT OF THE DISCLOSURE

A method for fabricating a plated product including a basecoat layer, a metal plating layer, and a topcoat layer that are formed on a surface of a base is provided. The method includes the step of forming the basecoat layer and the metal plating layer successively on the surface of the base. The step is followed by removing impurities from the surface of the metal plating layer. The topcoat layer is then formed on the surface of the metal plating layer.
